Measurements

8.88 - 8.73 x 6.45 mm

Table

55%

Crown Height - Angle

16% - 35.5°

Pavilion Depth - Angle

43% - 40.7°

Girdle Thickness

MEDIUM (FACETED)

Culet

POINTED

FLUORESCENCE

NONE

The symbols do not usually reflect the size of the characteristics.  
Red symbols indicate internal characteristics.  
Green symbols indicate external characteristics.

Insignificant external marks visible under  
high magnification only are not shown.

Do not use this report as the sole basis for purchase or sale of diamonds. Appropriate appraisal and certification should be obtained from a qualified professional.

The gemological analysis of diamonds, precious stones and other minerals must be carried out by gemmologists with many years' experience in the field who have a keen sense of the professional code of ethics governing their work as well as a thorough knowledge of crystallographic, optical and physical phenomena.

The identification of the various species and varieties of stones, the distinction between natural and synthetic material, as well as various treatment methods currently encountered are all very sensitive factors. Most specifically for diamonds, the laws of reflection and dispersion of light, the related geometric data as well as knowledge of all aspects involved in the cutting process are essential.

This gemological report is provided upon request of the customer and/or the owner of the gem. By making this report IGI does not agree to purchase or resell the article. Neither IGI nor any member of its staff shall, at any time, be held responsible for any discrepancy which may result from the application of other grading methods. Neither the client nor any purchaser of the gem shall regard this Report as an appraisal nor as a guarantee of value.

**This report is subject to the terms and conditions set forth above and on reverse.**
